

WLI 110 / 130

VENTILATION KEYPAD FOR WLC 100

**Application**

- ventilation keypad for CombiLink control unit type WLC 100
- can be combined with an Infrared remote control type WLR 100

With the keypad window actuators and actuator groups can be operated manually. Furthermore, the keypad makes it possible to operate window actuators and actuator groups via the infrared remote control WLR 100.

WLI 110

The keypad can be used for individual control of 1 actuator or 1 actuator group.

WLI 130

The keypad can be used for individual control of up to 3 actuators or 3 actuator groups.

Description

Function of the buttons: OPEN / STOP / CLOSE

From the factory the keypad has been preset so that the motor will automatically travel to the end-stop after one press of the button. If desired, the keypad can easily be set so that the motor will run only as long as the button is pressed.

The keypad has a built-in infrared receiver with a programmable safety code. If the keypad is to be operated through an infrared remote control, this is possible only when the security codes of the keypad and the remote control are set identically.

The keypad is mounted on the wall.

The keypad can be combined with the following CombiLink products from WindowMaster:

- WLC CombiLink control unit
- WLR 100 infrared remote control

For more information on these products please refer to the corresponding product sheets.
