

The 10 A Switch Actuators are modular installation devices in proM design for installation in the distribution board on 35 mm mounting rails.

The connection to the ABB i-bus® EIB / KNX is implemented via a Bus Connection Terminal.

The device does not require an additional power supply.

The actuators switch up to 12 independent electrical loads via potential free contacts.

The outputs are connected using screw terminals with combination drive head screws. Each output is controlled separately via the EIB / KNX.

The switch actuators can be manually operated via an operating element which simultaneously indicates the switch status. The actuators are particularly suitable for switching ohmic loads, inductive and capacitive loads as well as fluorescent lamp loads (AX) according to EN 60669.

Note:

The programming requires the EIB Software Tool ETS2 V1.3 or higher. If the ETS3 is used a ".VD3" type file must be imported.

The application program is located within the ETS2 / ETS3 in the category ABB/output/Binary output, x-fold/switch, xf10/1 (x = 2, 4, 8 or 12, number of outputs).

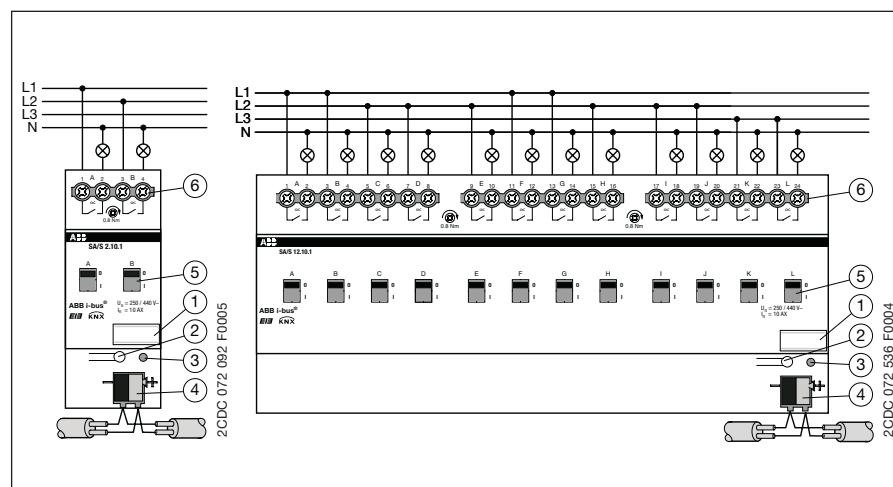

Detailed information about the application can be found in the product manual for the "Switch Actuators SA/S".

This manual can be free downloaded under www.abb.de/eib.
