

TECHNICAL DATA

# **ABB i-bus® KNX**

## US/U x.3

## Universal interface

—

## Device description

The devices are flush mounting devices (FM). They are designed for installation in flush mounting sockets with a diameter of 60 mm. The devices can be placed behind electrical equipment (e.g. pushbuttons).

The devices are KNX-certified and can be used as products in a KNX system  
→ EU declaration of conformity.

The devices are powered via the bus (ABB i-bus® KNX) and require no additional auxiliary voltage.

The connection to the bus (ABB i-bus® KNX) is made via a KNX bus connection terminal on the side of the housing.

The connections at the inputs or outputs are made via plug-in connecting cables  
→ designation on the housing.

The software application Engineering Tool Software (ETS) is used for physical address assignment and parameterization.

## Device functions

Each channel can be used as either an input or an output.

The inputs are used as an interface for operating KNX systems via conventional buttons/switches or for coupling floating binary signals (signal contacts).

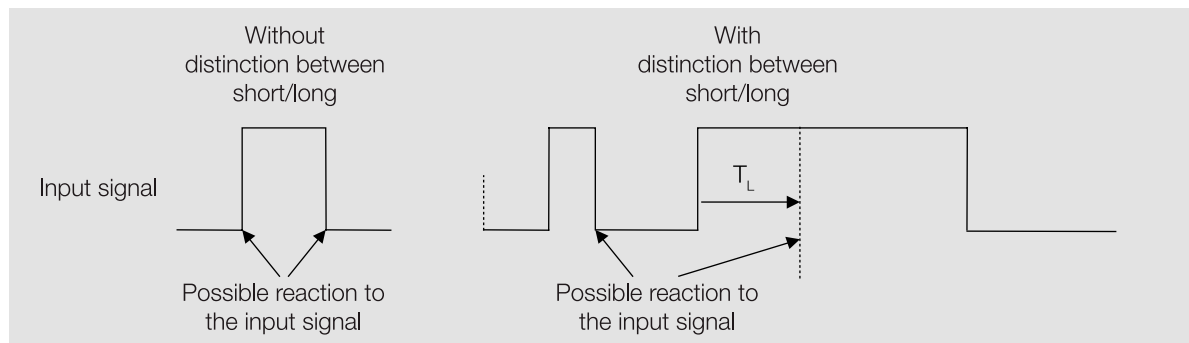

The outputs are used to control electrical loads (3.3 V DC, max. 5 mA, limited by pre-resistor) in a KNX environment.

When the contacts connected to the device inputs are operated, the devices send telegrams on the bus (ABB i-bus® KNX) via the application-specific Group Objects.

## Distinction between short and long operation

The devices react to the rising or falling edge that is triggered by operating one of the contacts connected to the device input. Each time an edge is triggered, the devices send telegrams to the Group Objects that are enabled for the input.

If you wish to distinguish between short and long operation (e.g. for the execution of different events), you need to specify, in the parameters, how long a connected contact must be operated for in order to be recognized as a long operation.

### **Note**

$T_L$  is the time from which a long operation is detected.

## Connections

The devices possess the following connections:

- Depending on the device type – 2 or 4 channels
  - each channel can be used as an input or an output
  - Binary inputs for the acquisition of floating binary signals
  - Outputs for connecting electrical loads (3.3 V DC, max. 5 mA, limited by pre-resistor)
- 1 KNX bus connection

## Inputs

Application/function	a	b	c	d
Switch (1-button operation)	x	x	x	x
Switch (2-button operation)	x		x	
Blind/shutter (1-button operation)	x	x	x	x
Blind/shutter (2-button operation)	x		x	
Switch/dim (1-button operation)	x	x	x	x
Switch/dim (2-button operation)	x		x	
Scenes	x	x	x	x
Send value/multiple operation	x	x	x	x
Fault indicator/logic input	x	x	x	x
Switching sequence (1-button operation)	x	x	x	x
Switching sequence (2-button operation)	x		x	
Pulse counter	x	x	x	x
Logic	x	x	x	x
Block input	x	x	x	x

## Outputs

Application/function	A	B	C	D
LED control	x	x	x	x

The product family described in this document includes the following devices:

Device type	Name	Features
US/U 2.3	Universal interface	2-fold, FM
US/U 4.3	Universal interface	4-fold, FM
